

DUROPAL

A **PFLIEDERER** company.

*Only the Stars
in the Heavens
glisten so Brightly.*

TEKFORM

Do stars sparkle, or do they scintillate?

The new surface from Duropal definitely scintillates with its myriads of fascinating facets and alluring starshine-like flashes that really capture the eye and invite your touch.

Duropal's surface designers wanted to bring even more life into their products. The result of their efforts is "Crystal Stone", a new and extremely hard-wearing surface texture that echoes the trend for natural stone surfaces.

To the touch it has a distinctly tangible, irregular and very natural structure, and visually an enchanting combination of matt and gloss that dances when caught in the light. Depending on how the observer is standing, Crystal Stone either spangles with starlike gloss highlights or displays its silky matt topography. This interaction offers depth and character to plain colours. Crystalline inclusions as in granite, give solid colours a sense of liveliness and bring out the various facets of a particular colourway. Used in combination with our terrazzo designs, the surface achieves a convincingly realistic and natural appearance, both with regard to looks and feel. It is the fine, grainy structure of Crystal Stone that lends a certain tangible vitality. The result: colours are felt and experienced. One reason why Crystal Stone is the evolution in surface development.

In Crystal Stone, Duropal has managed to achieve the perfect compromise between an organic structure and hygienic, easy-to-clean surface. Duropal make sure that the tiny peaks and troughs are not too pronounced. This ensures that despite the textured appearance, horizontal applications such as kitchen worktops have uncompromised hygienic properties, exceed the demands of normal abrasion resistance and uphold the scratch resistance quality you expect from Duropal.

- REALISTIC, ORGANIC FEEL
- BRINGS PLAIN COLOURS TO LIFE
- HYGIENIC
- EASY TO CLEAN
- SCRATCH & ABRASION RESISTANT
- VERTICAL OR HORIZONTAL APPLICATIONS

And suddenly your clients can dream of the etherial within their own four walls with the stars. - Tekform brings to you a range of seven decors available in the new 'CT' Finish.

Please note: Due to limitations of the printing process, colours may vary from those shown in this brochure. Please order a product sample from one of our Branches.

The constellation Crux, or "The Southern Cross" is the best known and most represented star group in the Southern Hemisphere and can be seen all year round from almost anywhere in Australia. The group's distinctive shape is easily located because of its brightness and close proximity to the pointer stars Alpha & Beta Centauri. Alpha Centauri being the closest star to earth and the third brightest star in the night sky. Shining brightly like the spangling Duropal CT surface.
