

Grass - Argumentation CARD

Airmatic Pin

The Airmatic drill-in shock absorber developed in-house has a decisive advantage over competitor products. The function principle of our reliable cushioning system is based on the environmentally friendly medium air. There is no risk of leaking fluids which could impair hygiene in the kitchen living space.

No risk of leakage - hygienic and reliable.

Benefits for the manufacturer

- **Use**

The Airmatic drill-in shock absorber system can be used for all Grass hinges with self-closing feature as well as for other product makes.

Consistent cushioning throughout the entire kitchen irrespective of the hinges used.

- **Versatility**

We cover the full spectrum to perfection with a single Airmatic solution. It is suitable for all door sizes, shapes and materials (framed, aluminium framed and glass doors).

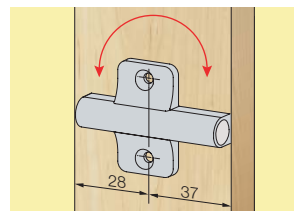

Optimal system versatility geared to different doors, making handling and logistics delightfully straightforward.

- **Logistics**

The bifunctional line hole adapter plate offers flexibility of use for either 28mm or 37mm hole lines in the cabinet.

Bifunctional use - provides logistical benefits.

Benefits for the end user

- **Even greater user comfort in the kitchen**

Unabated door slamming against the cabinet is a thing of the past. Doors close gently and virtually without a sound, as if by themselves.

The drill-in shock absorber for doors gives the cabinet added value.

Drastic reduction of noise in the kitchen living and social gathering space.

- **Air provides reliable cushioning**

Based on the cushioning system which uses air as the environmentally friendly operating medium, there are no fluids such as oil or silicone which might leak.

This prevents the risk of soiling for cabinet and contents.

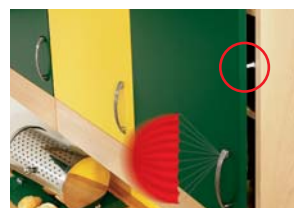

Maintenance-free, no risk of leakage - hygienically clean and reliable.

- **Gentle on cabinet and contents**

Gentle and controlled braking of the door's closing movement reduces the wear and tear on cabinet and contents.

Nothing falls over, no items are knocked or thrown into disarray.

Airmatic Pin

Benefits for the installer

- **Retrofitting**

Retrofitting is no problem with our adapter plates or by drilling a hole into the front edge of the cabinet. Our standard adapter plate in particular provides a fast and easy means of installation. Two positioning flaps immediately provide a defined position from the edge of the cabinet.

Rapid retrofitting - no need for an additional drilling jig on site and no marking operation required.

- **Installation aid**

Simply positioning the multifunctional drilling jig on site will make light work of drilling the fastening holes for other adapter plate versions as well as the hole in the front edge of the cabinet.

No complex machining on site.
