Titus+Lama+Huwil highlights at ZOW Pordenone and Ambienta

Titus+Lama+Huwil Group put new electric door lifting systems into regular volume production

Huwilift E-Strato, E-Senso and E-Verso systems provide practical and easy 'nohands' opening and closing operated by a wireless button

The Titus+Lama+Huwil Group has now started regular volume production of its Huwilift E-Strato, E-Senso and E-Verso electrically powered door lifting systems, first launched in prototype versions in 2007, making them **the first systems of this type to become commercially available in the furniture market.**

E-Strato, E-Senso and E-Verso are the latest products in the expanding range of Huwilift second generation effort-free door lifting systems, designed to ensure smooth and silent operation, with soft and safe closing. The electric systems, which remove the need for door handles, are operated by a wireless button. This no-hands feature will satisfy even the most demanding domestic furniture user as well as adding extra luxury for prestigious hotels and offices. It also provides a vital practical feature for the elderly or physically challenged, as well as meeting the special ergonomic requirements of working spaces and 'clean rooms' where the capability to open a cabinet door without touching it is particularly useful. The electric lifters offer a large opening and closing capacity and easy door alignment. This ensures perfect operation and alignment for doors covering a wide range of sizes and weights. The E-fit systems incorporate a safety-stop feature that prevents injuries as the door will stop automatically if something interferes with its movement.
